**Subject:** Request for GC/MS Data

[REDACTED] you asked for the original data request regarding scans for the Charleston drinking water samples. I can't seem to locate one that might have gone to the WV American Huntington Lab, so I don't know if there was an e-mailed request to [REDACTED] Ex. 6 - Personal Privacy [REDACTED] or rather an effort to make the request by telephone. Here is the substance of the request as made to another laboratory. Cindy Caporale's contact information appears below. Thanks for your effort.--Vicky

**Subject:** Charleston DW GC/MS Data Request

I am the USEPA R3 Lab Manager and I am working with our Drinking Water Program managers to review existing GC/MS data that may have been acquired by laboratories during the initial days of the Charleston Drinking Water Incident.

Did your laboratory run the drinking water samples using GC/MS in full-scan for any of the drinking water samples (pre- and post-treatment)? If so, we would be interested in the raw data from some of the sample analysis. Below is the specific information we are seeking.

VOC and SVOC GC/MS raw data files, including a TIC report processed against the NIST or similar library, which includes the chromatogram and spectra for the 20 largest TICs, for the following samples that were been analyzed using a full scan rather than targeted MCHM scan:

- Approximately 4 of the highest quantitative results for MCHM at locations in the distribution system
- Plant finished water sample showing high quantitative result for MCHM

Please clarify the instrument type, method used (Drinking water versus SW-846 type protocol), and preservative/quench agent.

Please feel free to contact me for more information or if you have any questions.

Thanks,  
Cindy
